DETAILED ACTION

Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to a position sense interface, classified in class 73, subclass 514.32.
 - II. Claims 17-25, drawn to an integrated circuit, classified in class 73, subclass 504.02.
 - III. Claims 26-38, drawn to a position sense interface, classified in class 73, subclass 514.32.
 - IV. Claims 42-46, drawn to a microelectrical structure, classified in class 73, subclass 514.01

2. The inventions are distinct, each from the other because:

Inventions I. and II. are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a position sense interface and an integrated circuit makes use of position sensors. However the two inventions have the capability to function without the dependence of the other invention.

3. Inventions I. and III. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

Art Unit: 2856

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because both inventions are the same thing. The subcombination has separate utility such as negative feedback loop. However this separate utility can be combined with the first invention.

4. Inventions I. and IV. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the position sense interface does not have to be used with the subcombination of a micro-mechanical element. The subcombination has separate utility such as an integration of mechanical elements that does not have to contain a position sense interface.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group IV, restriction for examination purposes as indicated is proper.

Art Unit: 2856

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
